Gunawan (Indonesia)**

**Key words:** Cadastre; Land management; Spatial planning; Urban renewal; sustainable development

## **SUMMARY**

The new paradigms of Sustainable Development are Equity of Growth and Development, Interdependency of Socio Cultural, Socio Economic and Politics, Horizontal and Vertical, Equity of National Land Administration Services (NLAS), Citizen Participation in Development Planning and Borderless Socio Economic Development. The objective of this paper tries to explain one of these paradigms that influence the sustainable development in Indonesia, especially in national land administration services. The main issue of equity NLAS is how to build of public trust, improvement of land services and land registration, improvement of people's rights on land, development of a national land management information system and land document security system, development of large scale land mapping and a land ownership database and development of land laws and policies. Those issues are related in supporting sustainable development in Indonesia. Sustainable Development has a meaning that each case development should lead to progress, expressed primarily by welfare improvements in the communities involved and that it will occur through specific changes (Stimson,R.J, Stough, R.R, Roberts, B.H, 2006). The other opinion of sustainable development is a concept for combining environment, economy and society in order to develop the area of nations. According to GSA Office of Government area Policy (2000), sustainable development means integrating the decision-making process across your organization, so that every decision is made with an eye to the greatest long-term benefits. The effort to build a truly sustainable way of life require the integration of action in three key areas, namely: economic growth and equity, conserving natural resources and the environment and social development (Memby, 2009). Some people also believe that the concept of sustainable development should include preserving the environment for other species as well as for people. The conclusion of this paper is proposing a new paradigm of sustainable development by using NLAS approach. The National Land Agency, as the government institution which has authority in land policy, can apply to sustainable development comprise with the ecological (environment), the land used regulations, the economic, and the socio cultural aspects.
