Key words: Cadastre; Capacity building; Curricula; Education; Academic Networks, capacity building, Education

SUMMARY

Networks of academic, educational and training institutions are proven platforms for knowledge sharing, exchange experiences in education and capacity development. Examples of such networks are UN-HABITAT Global Land Tool Network – GLTN, Eastern Africa Land Administration Network – EALAN, Latin America Land Administration Network (LALAN) and others. The objective of these networks could be: perform activities that can support capacity development, exchange experiences and increase knowledge in the areas of geodesy, surveying, geo-information sciences and earth observation, geo-information management, land administration etc. This paper aims to explore and elaborate the nexus between academic networks, capacity building and knowledge sharing.
