

Effort to Keep Number of Field Surveyors

Masaru Kaidzu (Japan)

Key words: Education; Vocational school; Survey Act

SUMMARY

Field Surveyors are the key group to implement survey. Recently, in Japan, due to decrease of young population and diversity of job field in modern society, high school students who want to enter vocational schools have decreased. Presently number of students who enter vocational schools are stable in low level.

Graduates of vocational schools are trained more in field practice compared to university graduates. Human resource is always a big issue to meet demand of construction and survey on site. This paper shows recent effort to cope with such problems including change of regulation.

Effort to Keep Number of Field Surveyors (12886)
